

If power companies pull the plug on fair market net metering—taking away our right to produce our own power—all West Virginians will suffer the consequences.

For over a decade, WV's net metering policy has helped create local jobs, kept the lights on, and protected Mountaineers from unfair fees and rising utility bills. Now, greedy power companies are pushing to eliminate these protections.

We are asking West Virginians like you to submit videos sharing a positive experience you've had with solar and energy credits. Help us take a stand for our energy freedom!

We ask that you submit a short phone video (vertical or horizontal). When you start recording, please pause for **three** seconds before speaking, and when you are done, please pause for **three** seconds before ending the video.

Below are some prompts if you need a place to start.

- If you are a homeowner. . .
 - How has having solar panels impacted your energy bills?
 - How has your home's resale value been affected by having solar panels?
- If you are a business owner, how have saving costs on energy bills benefited you economically?
- If you have solar panels, what kind of financial incentives does your power company offer to folks with solar?

To submit your video, please upload to [this Google form](#).

Thank you for sharing your story!
